DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention, and the applicant is required to choose one of the two following for examination:

- A. Method for testing external connections to a semiconductor device;
- B. Method for forming a structure for testing external connections;

If Applicant wishes to elect group A, then one from each of the following groups must also be chosen:

C. Type of test:

- 1. Boundary scan test;
- 2. Input/output wrap test;
- 3. High frequency closed loop self test of drivers and receivers;
- 4. Burn-in test.

D. External electrical path is provided:

- 1. Between pairs of external connections;
- 2. Between a plurality of external connections;
- 3. Between non-adjacent external connections.

/

An example of a properly elected species would be as follows:

A method for testing external connections to a semiconductor device, wherein the test is a burn-in test and the external electrical path is provided between non-adjacent external connections. This election would be A, C4, D3.

/

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was not made to the applicant due to the complexity of the restriction requirement.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
